## 1. Introduction

This guide will walk you through the process of installing, setting up, and distributing the College Event Score System to multiple users. This includes configuring the application, setting up a centralized database, and ensuring that all users have access to the same database. The guide is intended for use by an administrator who will perform the initial setup.

## 2. System Requirements

Before you begin, ensure that the following system requirements are met:

- **Operating System:** Windows 7 or higher
- **RAM:** 2 GB minimum (4 GB recommended)
- **Disk Space:** 500 MB free space
- **Network:** Stable internet connection for downloading the application and accessing the cloud database
- **Permissions:** Administrator access to install software and modify system settings

## 3. Installation Steps

### *1. Download the Installer*

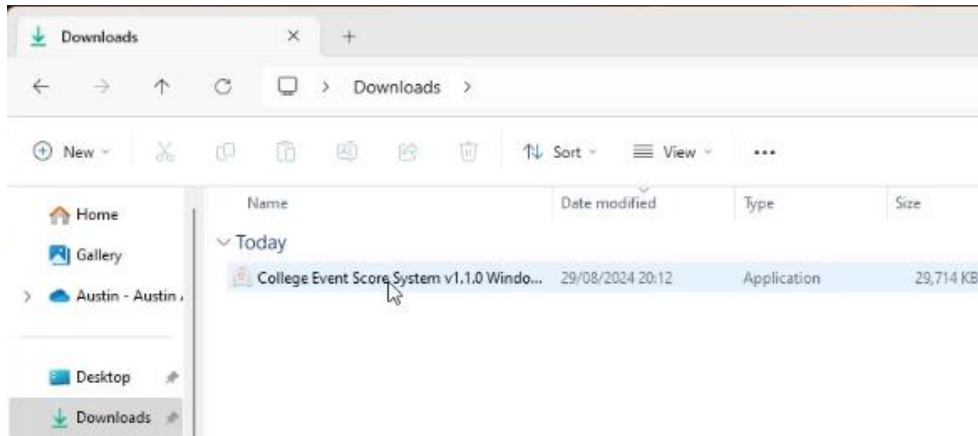

First, download the College Event Score System installer from the provided link or media.

1. Visit the [Official download link](#).
2. Click on the "Download Installer" button.
3. Save the installer to a preferred location on your computer.

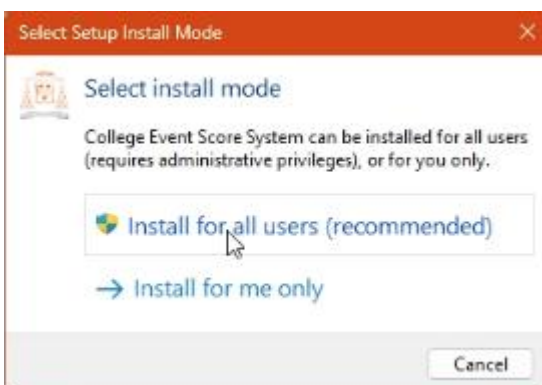

## 2. Run the Installer

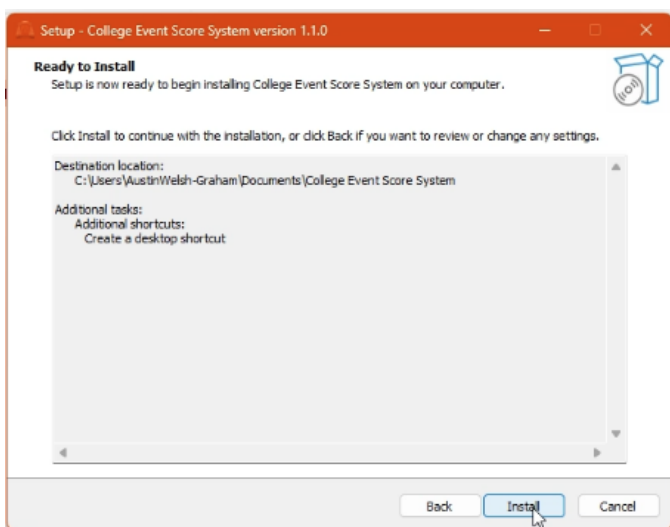

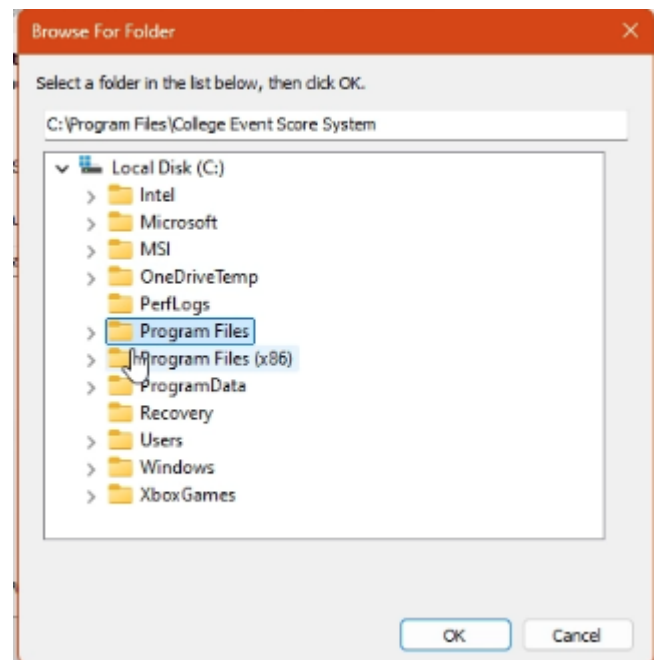

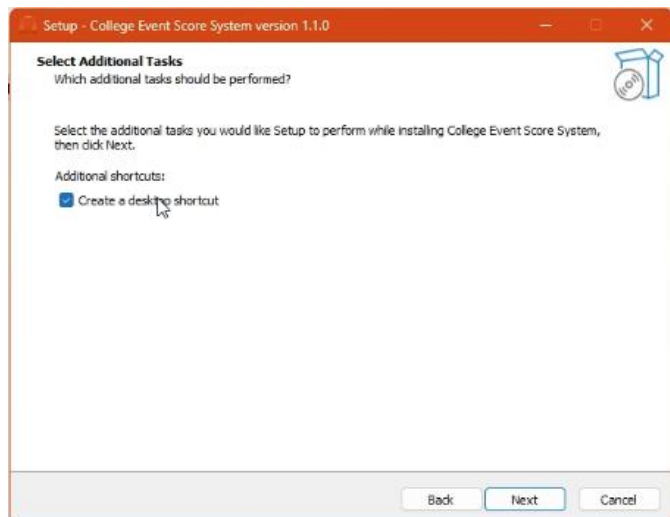

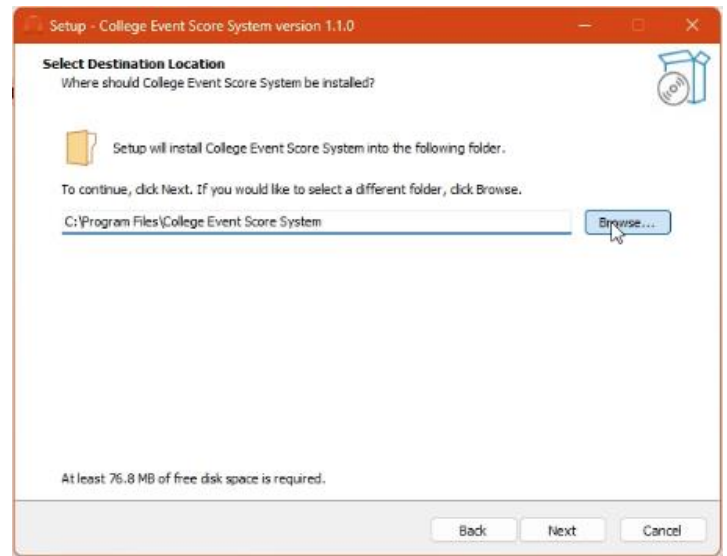

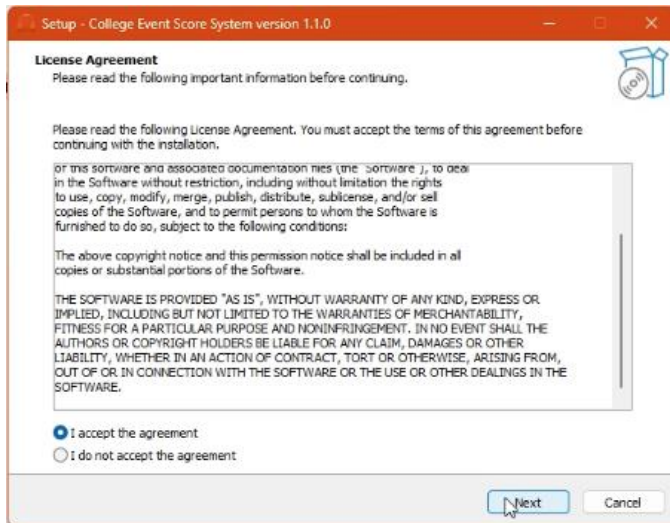

Once the installer is downloaded:

1. Navigate to the location where you saved the installer.
2. Double-click the installer file (e.g., College Event Score System vx.y.z Windows.exe) to begin the installation process.

3. Follow the on-screen instructions to complete the installation.
  - Install for all users.
  - Accept the license agreement.
  - Choose the destination folder for the application. (Project Files will require admin privileges when opening the application)
  - Optionally, create a desktop shortcut for easy access.
  - Confirm and install.

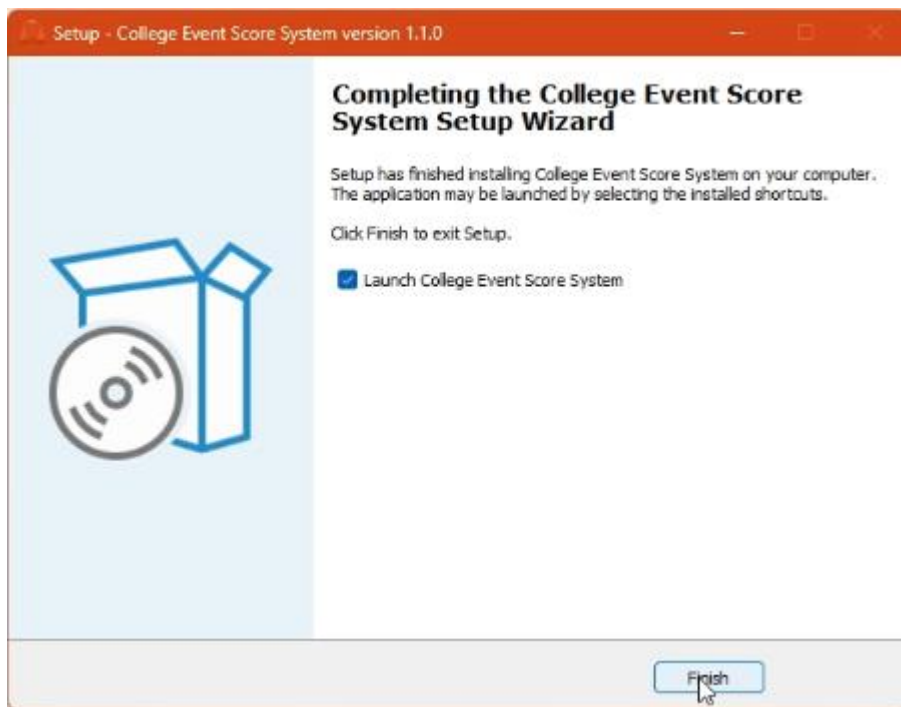

### 3. Complete Installation

After the installation is complete:

1. Click "Finish" to close the installer.
2. Launch the application from the Start Menu or desktop shortcut.

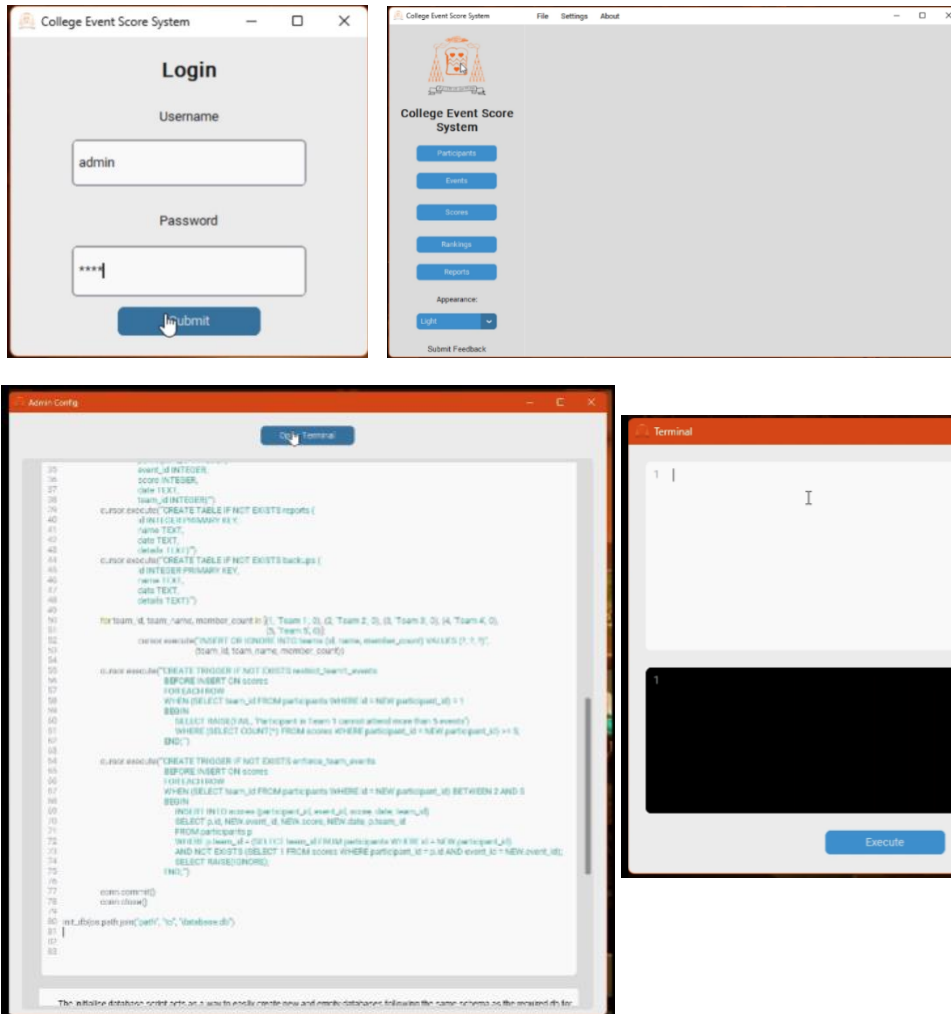

## Setting Up the Database

### 1. Initial Database Setup

The application requires a database to store all participant and event data. Follow these steps to set up the database:

1. **Locate the Example Script:** The Application includes an example script to initialise the database within the admin menu.
2. **Access the Terminal:** The application includes a terminal interface to execute Python script. To access it:

- Open the application.
- Sign in to an admin account [admin : atts].
- Click the logo to open admin menu
- Open terminal

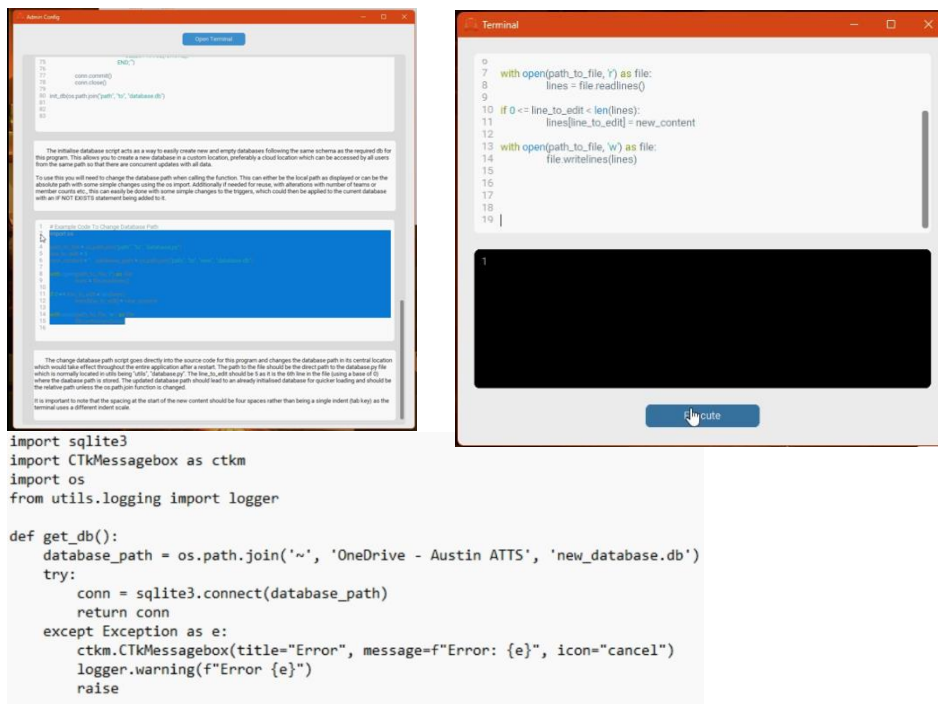

### 3. Run the Script:

- Copy and paste the commands from the example script into the terminal and set the database path to the desired path. (slight modifications might be required)
- Verify that the tables have been created successfully.

## Distributing the Application

### 1. Centralised Access

Once the database is configured and the application is tested:

1. **Create a Copy of the Software:** Copy the application files to a shared location (e.g., a network drive or cloud storage) accessible to all intended users.
2. **Provide a Shortcut:** Provide a shortcut application to each intended user to access the software
3. **Provide User Instructions:** Include a link to the user guide so that each user can understand how to use the software.

### 2. Device Distribution

1. **Send the Application Files:** Place the application files in a central location, or email it out to each user to store on their personal Devices

2. **Ensure Database Path:** Make sure the database path is accessible by each device.

### ***3. Notify Users***

Send an email or communication to all users with the following information:

- A link to download or access the software.
- A link to the user guide.
- Any additional notes about network requirements or permissions needed.

## **Setting Up the Application for End Users**

### ***1. Testing the Installation***

After configuring the database path:

1. **Create a Test Entry:**
  - Add a new participant or event to the database.
  - Verify that the entry is accessible by other users on the network.
2. **Check for Errors:**
  - If there are any issues, consult the troubleshooting section below or contact support.

## **Troubleshooting**

If you encounter issues during installation or setup, consider the following:

- **Installation Errors:** Ensure you have administrator rights to install the application. Disable any antivirus software temporarily if it blocks the installation.
- **Database Connection Issues:** Verify the path to the database is correct and that you have network access. Ensure that the database server is running if applicable.

- **Application Crashes:** Check for updates to the application or try reinstalling it.  
Ensure that all dependencies are properly installed.

For persistent issues, contact support.

## Support
